

Clients Testimonials

Contractor Compliance

You are able to use your ground water for almost anything, once it has been treated with one of our efficient systems. With over 200 successful installations, GWS have been in the forefront of technical development and expertise for a number of years. We are now the leaders here in Queensland, when it comes to groundwater treatment. *Be wary of those companies claiming to offer water solutions, with inferior products. Most importantly, here are some positive comments from clients, who now benefit from using some of our proven systems.

Prior to the installation, our bore was causing significant staining problems on sandstone landscaping. The unit installed by Global Water Solutions completely removed the unsightly iron from our water. The Brisbane city council analysed our treated water after the installation and determined that the water quality is significantly superior to the town water supply.

Darrel Butcher - Bore Owner - Ascot Qld.

Having a constant unlimited supply of clean water to use for whatever we need it for, is like having money in the bank!

Ron Raines - Spear Owner - Clear Island Waters Qld.

I'm a raving fan. I believe every household should have this product (iron removal system) i use the water freely now, without incurring excess water bills!

Shirley Mordey - Spear Owner - Broadbeach Waters Qld.

After having a bore drilled, we contacted Global Water Solutions to investigate the water quality. Unlike so many operators we contacted, GWS acted immediately, to take the water sample and returned the results accompanied by the recommended solution. I would highly recommend GWS for their initiative, enthusiasm and determination to get the job 'right'.

Marie-Louise Theile - Network Ten Qld.

Call to discuss how we could treat your ground water from as little as \$2285.00 +G.S.T.

*If there is not an opportunity to utilise the ground water on your property, (some ground water is impossible to treat) you may like to take advantage of our home waterfront desalination range. Using desalination to treat seawater is a perfect solution to your water requirements, if your home is located on a canal, river or ocean-front.
Desalination systems for waterfront properties
