

Water websites - websites for water

Contractor Compliance

Global Water Solutions has the facilities to help you host your Water Industry Website. We offer the latest technology in web server applications, content management services and support. New websites, domain hosting, domain registration, old websites re-developed, new look business branding and 24 hour support. If your business website is not performing, or maybe needs to be optimised to reach your market, then we have the solutions. 'Water Industry Websites'.

Websites that work: Many websites, are merely a digital brochure, placed on a domain, with absolutely no functionality. Speak to us about how we can help your business gain more exposure on the internet.

Your website hosting and development: We do not offer set pricing for website development, because the needs of individual businesses can vary greatly. There are many different extensions and components that may be required. Example: you may require an online store, for your website. This type of site is more time consuming to build and deploy, hence the cost would reflect the time spent on development. A general rule of thumb, do not go for the cheap website alternative. This will come back to bite you later, and will affect your business over the long term. You will need to budget for at-least , \$3500.00 for a starting point. Anywhere upto \$20,000 for highly developed sites, is not uncommon. There are many levels of development in between these figures and the average website is going to require a budget of around \$5000.00 including all mail settings and search engine optimisation, ongoing support etc etc. Our hosting is very competitive, including our 24 hour personal support.

We build 'industry specific websites' with search engine optimisation, in mind during the development. After all, the whole idea of a website, is to promote and reach as many potential clients and customers as possible. We build websites that work!! That's our promise.

For a 'no obligation appraisal' of your existing site, or re-development quotation, simply contact us here at Global Water Solutions.
