

Mine and Remote Area Desalination

Mine and Remote Area Installation

Fresh water supplies in Mining and Remote area's are often a major concern, as water is the lifeblood of any large scale project . Global Water Solutions can supply your mine or remote area installation, with a number of water purification and filtration options. Our Desalination Systems are robust and dependable, ideal for the extreme conditions associated with this environment. Pure water filtration systems, desalination, U.V sterilisation skids, iron removal, water softeners and carbon filtration units are all available for immediate delivery to site. Shipping, transport and delivery logistics, can be arranged from our factory here in Stapylton, Queensland.

We can also provide stainless steel tanks for rainwater harvesting, and reverse osmosis product storage. Containerised desalination, filtration plant and softening systems are fully transportable and semi permanent, for ease of relocation. Plant is available for long or short term hire, or outright purchase. Finance is available for large scale projects. Many of our systems are custom built to suit the application. Contact us today

Island Communities - Resorts - Marina Complexes - Waterfront

Fresh water is equally important for island communities. Global Water Solutions can supply desalination and filtration equipment for island developments, marina complexes or resorts. Our broad range of products, allows us to cater for almost any water problems you may encounter in this environment. Existing bores or spears can be treated with a number of different systems. Shore based desalination plants for community supply, or even single dwellings may benefit from our light desal plant, designed to produce approx. 3000 litres per day. Water tanks made from 304 grade stainless steel, are especially suited to marine environments.

All equipment is constructed from stainless steel or high grade polyester plastics, totally resistant to salt air. For more information, or to speak with our Marine Engineer, simply send us an email from our contact page. We will respond to your enquiry, promptly. If you require an existing water source to be tested, we have available, a comprehensive water testing facility, with 24 hour return, analysis results. Sample kits are available by mail.
